

RECOVERY™

A COMPLETE NUTRITIONAL FORMULA
FOR SICK OR INJURED ANIMALS
(BIRDS, MAMMALS AND REPTILES)

USE ORALLY FOR:

- Animals needing a low-fiber, easily assimilated source of nutrients for transitioning from fluids to solids for normal gut function.
- Medical and surgical patients that are recovering from pansystemic organ failure.
- Animals in which anorexia has slowed gastrointestinal emptying time.
- A hand-feeding diet for insectivores.
- Nutritional support for birds during the transition phase of a diet change.

BENEFITS

✓	Availability of easily digested nutrients
✓	Essential nutritional support for critically ill medical or surgical patients or those with poor dietary status
✓	Easily syringeable formula
✓	Product includes essential amino acids, including those needed for insectivores
✓	Is safe and effective for most species (dogs, cats, other mammals including small rodents, birds, reptiles, amphibians and critically ill wildlife)

INGREDIENTS

Soy protein isolate, hi-oleic sunflower oil, sugar, calcium carbonate, potassium chloride, vitamin supplement (vitamin A acetate, vitamin D₃, dl-alpha tocopheryl acetate, vitamin B₁₂, riboflavin, d-calcium pantothenate, niacin, pyridoxine hydrochloride, d-biotin, thiamine mononitrate, folic acid, zinc sulfate, manganese sulfate, copper sulfate, sodium selenite, calcium carbonate, vegetable oil), phosphatidyl choline, di-calcium phosphate, methionine, vitamin E

Dry Mix Guaranteed Analysis: Crude protein (min.) 35%, crude fat (min.) 19%, crude fiber (max.) 1%, moisture (max.) 10%

Simplified biosynthesis pathway from methionine to taurine

QUALITY ASSURANCE AND STORAGE

Recovery™ is hand-crafted in small batches in the USA to ensure the highest possible quality. Store in the refrigerator or freezer to help maintain freshness. **Use by date located on the bag or within 8 weeks of opening.**

DIRECTIONS

Mix a fresh batch of Recovery™ for each feeding. Do not reuse, reheat or microwave mixed formula.

Caution: The correct feeding technique must be used in order to prevent injury to the animal or inhalation of the formula, which could result in pneumonia and death. Tube feeding should be done under veterinary supervision.

- **Step 1:** Mix 1 part dry Recovery™ (enough for a single feeding) with 2-3 parts warmed (103°F [39°C]) drinking water or to desired consistency.
- **Step 2:** Tube feed or spoon feed warmed formula based on veterinary recommendations.
- **Step 3:** Repeat feeding as necessary to maintain or increase the animal's body weight. Recovery™ is a low-fiber formula and is easy to digest; therefore, frequent feedings may be necessary.

Cats only: For long-term feeding (more than 1 week), add 1 can chicken baby food, divided into equal parts for daily feedings.
